

Bandit grinds through NSW's mid north coast

Newly established property management company, Macleay Valley All Terrain Tractor, recently invested in Bandit's Model 2100 diesel stump grinder and loves how hard it works.

Owner Steve Jeskie saw an opportunity in the industry for a grinder so when it was time to demonstrate grinders he looked no further than Bandit.

"I've been in the industry now for around four years and in that time I've seen first hand what Bandit machines are capable of. And Bandit has a great reputation for being tough and reliable machines that are easily serviced.

"So when I saw the opportunity and need for a service like this on the mid north coast I organised a field day on my property and arranged for Ben to demo the 2100. After seeing this particular model perform in my own property on really hard deadwood, I was so impressed with both Ben and Bandit that I knew I'd found my new grinder," said Steve.

Together with colleague, Noel Cheers, Steve has been booked solid ever since taking delivery of his new grinder along NSW's mid north coast in May.

"I love the versatility of this machine. It's tough and is just the right size to handle the type of hardwood commonly found on the mid north coast with no troubles," Steve said.
